

ABSTRACT

The present invention provides a method and device that allows a viewer to generate and overlay graphical data onto video images displayed on local and remote devices via a network such as the Internet. The method comprises inputting at least one instruction corresponding to a graphic into an input device; storing the at least one instruction in the input device; transmitting data corresponding to the instruction from the input device to a remote server operatively connected to at least one remote display interface, and selectively transmitting the instruction from the remote server to the at least one interface wherein the at least one interface overlays the graphic onto video displayed on a display device.
